

Profile

Seeking innovative and challenging position where I could oversee engineering projects, teams and also owning strategies, design, and develop projects at every stage, ensuring that the projects are completed efficiently, correctly, and on schedule.

Skills

- Practiced Agile methodology, fostering a collaborative work environment by providing clear goals and empowering team members to determine the most effective strategies to achieve them.
- Guided teams through problem solving processes, leveraging the ability to encourage and motivate individuals to achieve optimal performance.
- **Programming Language:** Kotlin, Java, Python, JavaScript
- **Framework and Libraries:** Jetpack Compose, React Native, ReactJS, NodeJS, ExpressJS, Flask, FastAPI, MERN/FARM Stack, Spring Boot
- **AI/ML:**Tensor Flow Lite, MLKit, OpenCV
- **Tools and Platform:** Git, SonarQube, Snyk, Android Studio, PyCharm, VS Code

Experience

SENIOR SOFTWARE DEVELOPER, ACCENTURE, NOIDA – AUGUST 2024 - NOW

- Designed a robust and scalable app architecture following **SOLID** principles, ensuring optimal performance and scalability as individual contributor.
- Implemented an offline first data **caching strategy using Room database**, significantly increasing data availability during network disruptions.
- Established a clear project structure and adhered to Android coding standards, enhancing maintainability and readability of the codebase in collaboration with the architecture team.
- Designed responsive and visually appealing user interfaces based on established design principles, prioritising a seamless user experience.
- Implement architectural patterns such as **MVVM or Clean Architecture** and integrate dependency injection framework Hilt.
- Created and maintained thorough documentation , code, and deployment processes, ensuring clarity for both current and future team members.
- Collaborated with the architecture team to align technical solutions with business objectives, driving architectural decisions and project milestones.
- Led technical discussions and made key architectural decisions while managing project deliverables independently with accountability and proactive communication.
- Assumed full ownership of project deliverables by driving initiatives with self motivation, ensuring accountability, and fostering proactive collaboration across cross functional teams.

SOFTWARE DEVELOPER, NIELSENIQ, PUNE – DECEMBER 2023 - JULY 2024

- Optimised application functionality by implementing SQLite enhancements aligned with stakeholder requirements.
- Enhanced system reliability by executing comprehensive root cause analyses and implementing strategic corrective actions to mitigate recurring issues.
- Achieved a **21% reduction** in incident rates through proactive code optimisation and robust code review processes.
- Strengthened data security and elevated client satisfaction by integrating **SonarQube**, and **Snyk** into the project workflow.
- Played a key role in the technology evaluation process, assessing and selecting the most suitable frameworks including React Native for cross platform development and native Android to align with the organisation's strategic objectives and enhance app scalability.
- Demonstrated leadership by developing and presenting a **proof of concept (POC)** for the new framework.

SOFTWARE DEVELOPER, IS-CEIT, SOLOMON ISLAND – APRIL 2023 - NOVEMBER 2023

- Actively participated in organising stakeholder meetings to gather requirements, clarify project goals, and help align deliverables with the strategic objectives.
- Played a key role in the project planning process, creating a clear work plan and timeline to ensure on time and on budget delivery of the waste management database system.
- Facilitated a user friendly Android application for waste data collection, monitoring, and reporting, ensuring seamless integration with existing Ministry systems and processes.
- Demonstrated the Android app and database system to ECD staff, collected feedback, and implemented improvements to enhance user experience and system performance.
- Contributed to building and improving the project's React front end portal for seamless integration with the Android app and database system.
- Designed and implemented advanced IT systems to support educational programs, ensuring efficient and reliable course delivery.
- Guided students and educators in building apps using Kotlin for Android and Python for FastAPI, enhancing practical learning outcomes.
- Collaborated with Pacific Island government partners to strengthen IT capabilities and drive digital education initiatives.
- Promoted technology adoption by empowering instructors and students with essential IT skills across multiple sectors.
- Supported the rollout of a new curriculum with the SINU team, contributing to a **20% increase** in student enrolment.

SOFTWARE DEVELOPER, CDAC, DELHI – MAY 2022 - APRIL 2023

- As an individual contributor in the role of Android developer, undertook end to end responsibilities, encompassing the entire app development lifecycle from design to development.
- Successfully built the app from scratch, demonstrating proficiency in architectural design and implementation.
- Pioneered the development of a new framework for Learning Management system, Architected MVVM Repository, resulting in a significant increase in code coverage up to **94%**.

- Proficient in Jetpack Compose, leveraging modular and testable design principles to enhance the development of dynamic and scalable user interfaces.
- Contributed in web portal development enabling real time acquisition and analysis of EEG brainwave data, empowering seamless cognitive and neurological research using FastAPI and ReactJS.
- Orchestrated cross functional collaboration with backend engineers to drive the end to end delivery of high impact mobile applications.
- Established robust processes for code reviews, documentation, and CI/CD pipelines, ensuring consistent quality and streamlined development workflows.
- Facilitated guidance to the new interns through **mentoring sessions** and collaborated effectively with Technical Director to align the project with overall objectives.

Machine Learning: Spearheaded the classification and detection of properties using TensorFlow, leveraging a dataset of over 1 million images under the direct supervision of the Director.

Android: Played a key role in the seamless migration of code from Java (MVC) to Kotlin (MVVM) for a Learning Management App with Augmented Reality, significantly enhancing code structure and maintainability.

SOFTWARE DEVELOPER, INDUS VALLEY PARTNERS, NOIDA – JUNE 2019 - DECEMBER 2019

- Proactively cultivated the skill of self training, emphasising the significance of process and data security in professional development.
- Demonstrated proficiency in developing scalable and optimised user interfaces, enhancing overall user experience and system performance.

Education

- CDAC, Pune – Post Graduate Diploma (**DMC**), Sept 2021 - April 2022
- Jaypee University – Graduation (**B.Tech**), July 2015 - June 2019
- Army Public School Barrackpore, West Bengal– **12th**, 2013 - 2014
- Kendriya Vidyalaya AF Station Barrackpore, West Bengal – **10th**, 2011- 2012

Certifications

- Advance Android Development: **AAD Instructor**, Dec 2025
- Java Full Stack **NLTech Trainings**, Dec 2025
- FastAPI Python : **Udemy**, Dec 2025
- Data Structure & Algorithms: **CDAC Pune**, Aug 2025
- MERN Full Stack: **CDAC Pune**, July 2025
- Mongo DB Developers Toolkit: **MongoDb**, Sep 2024
- Python Programming & Application: **CDAC Pune**, Aug 2024
- Master in Android Development: **MAD Instructor**, Feb 2024
- User Interface Design (Figma): **CDAC Mohali**, Feb 2023
- Augmented & Virtual Reality: **CDAC Pune**, Sept 2022
